AJA Version 15.1.0.2

General

Note: release notes will now only show changes from prev versions (5.3.1_r24945)

Tactic BugFixes

- Fix on Counter's orientation from trunk back to 5.3.1
- Fix so Shadow and Trail resolution matches.
- Added Alignment parameter in InfoBox so it can be positioned left/centre/right
- When placing down graphics with multiple keyframes the cross hair was not at the right position. This issue occurred when using tracked keyframes with turned off tracking. Now the position of the cross hair is properly estimated.
- Changing the height of keyframable points with shift key and mouse dragging was not working when All keyframe show mode was active.
