

LEAGUE PACKAGE INSTALLATION

This guide is for first time installation of the package

- ◆ For more information about League Packages, how to use and edit them, please follow the link to this tutorial: <https://vimeo.com/585898319>
- ◆ If you are already using a package and need to update composite styles, tools in the text tab or information on the .csv files, please copy these folders into your existing package as stand alone folders.
- ◆ In order for the package to work, it needs to be named to the **exact** same name as the original, i.e. LaLiga without any numbers or other differences.
- ◆ Installing an updated package will overwrite the previous one when placed into the RTSW folder and **delete all your existing analysis**. Alternatively, you can rename your old package (to La Liga 2 or La Liga Old for example) before installing the new version of the package. This will serve as a backup. Then, copy across necessary folders (ie analysis) to the new version of the package
- ◆ Visit our website: <https://sports.rtsw.co.uk>

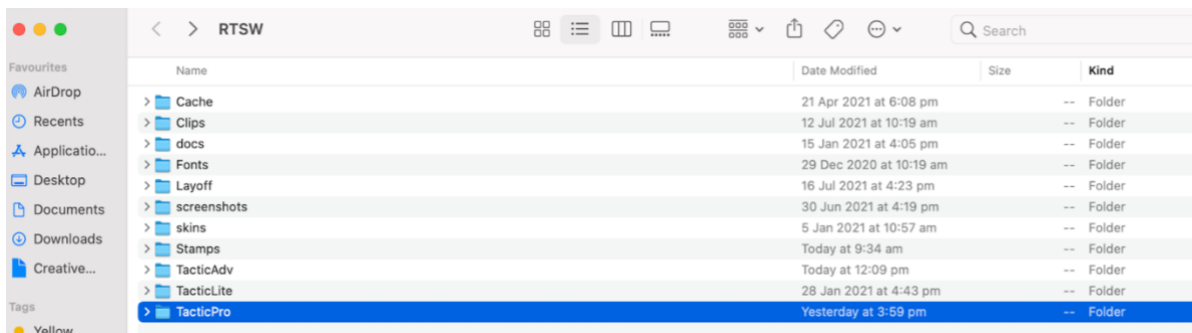

Click on Installers & Packages

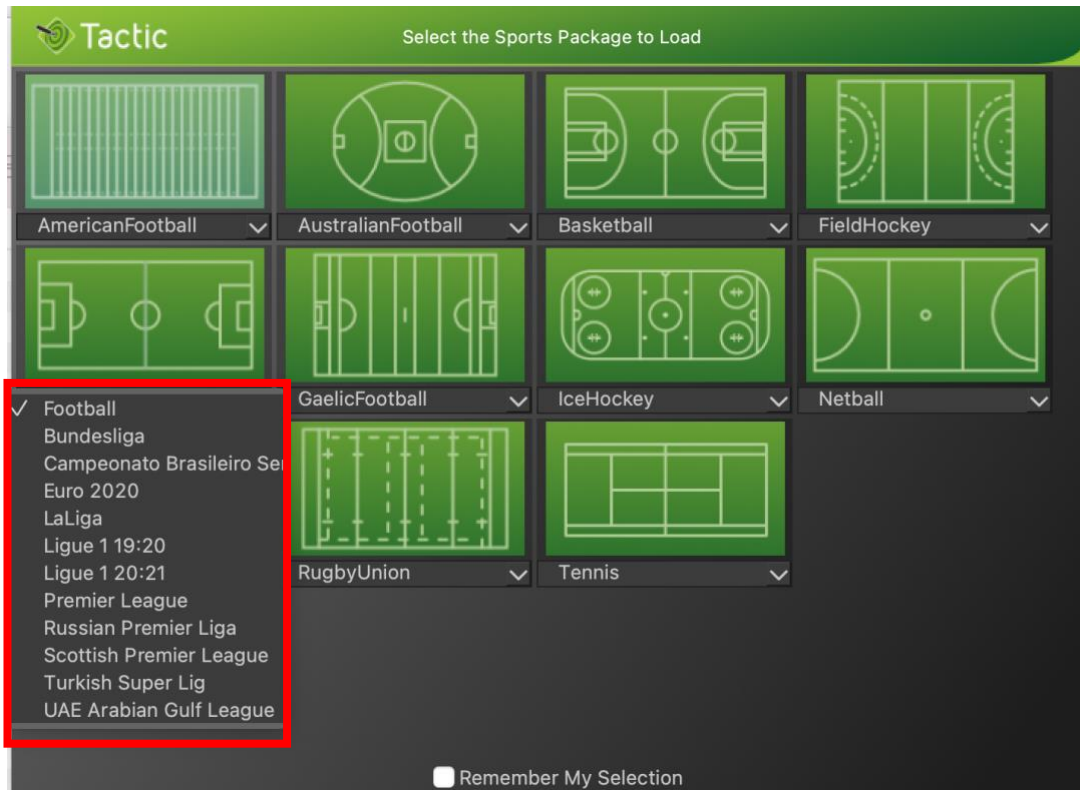

- Click on your chosen package
- It will be downloaded as a zipped package

- Click to unzip the package
- Drag the folder into the RTSW Folder and then into Tactic Pro, Advanced or Lite Folder

- ◆ Your package will now show in the dropdown menu under your sport

- ◆ Select your package to use
- ◆ If you cannot see this window when loading the software, see below:
 - ◆ Click the cog in the top right corner of the user interface
 - ◆ Click Switch Sport
 - ◆ Restart Tactic
